

Phase 2 plan is conditionally approved.

Please revise the following before implementation:

1. Update the booking lifecycle to include the final `paid` state:

`pending` → `accepted` → `in_progress` → `completed` → `paid`

The transition from `completed` to `paid` must occur only after successful payment verification.

2. Do not enforce GPS/geofencing validation for `accepted` → `in_progress` in Phase 2.

Allow workers to manually start bookings. Location verification can be introduced in a later phase.

3. Cancellation fees should not perform actual wallet deductions yet.

Track cancellation fee information in metadata only until the wallet, settlement, and refund systems are fully implemented.

4. Confirm whether any existing Booking documents require status backfills before migration execution.

After these revisions, provide the updated Phase 2 implementation plan and then proceed with implementation.
